

RETRO-PLATE

Tomorrow's Grocery Option Is Here Today

New flooring option meets your needs today...and in the future.

Non-toxic, low-impact finish materials are a necessity in the building and restoration of tomorrow's grocery stores. RetroPlated concrete floors offer the option of colors in conjunction with acid stains, dyes, and integral color. The RetroPlate System requires less maintenance than standard flooring and has the lowest life cycle cost of any floor coating or covering available. Increased reflectivity of up to 30% will allow you to impress your customers while improving your bottom line. Increase the store's ambience, while decreasing your lighting costs.

Grocery stores operate on narrow margins in today's competitive environment. Any means that you can take to improve your return on investment is a welcome relief, especially when one can also enhance your customer's shopping experience.

The RetroPlate System can be utilized with old and new concrete, and cementitious terrazzo. Not only does RetroPlate decrease the future maintenance costs, but it also can lower electricity costs through the benefit of its increased light reflectivity, in addition to enhancing the use of natural day lighting. Floors that have received the RetroPlate System of concrete polishing will not support combustion, and they meet ADA and OSHA requirements for slip co-efficient of friction. You just simply sweep or mop the floor, or utilize a floor scrubber with our neutral RetroClean cleaner, and your floor will take care of itself. Both you and your customer will enjoy the benefits of a concrete floor that has been polished by a member of RetroPlate's national network of Certified Applicators.
